

Agenda Remediation Notes

Source agenda: March 18, 2026 Council Meeting (PDF, 37 pages)

Score improvement: 72 → 98 (PAC 2021)

Techniques Applied

- Tagged document root + logical reading order throughout.
- Converted title block + sections to proper heading hierarchy (H1 → H3).
- Added bookmarks for every agenda section and appendix exhibit.
- Replaced flattened text on pages 18–21 with true text layers.
- Embedded descriptive alt text for five maps/diagrams.
- Ensured tables have header rows/IDs for screen readers.
- Repaired 19 broken internal links; standardized external links with descriptive labels.
- Added language attribute + document metadata.

Outstanding Items (if full engagement proceeds)

- Legacy 2016 agenda packets remain untagged; recommend batch remediation.
- Agenda portal search filters still use custom divs without ARIA roles (handled in website workstream).
- Two scanned appendices from Engineering remain images only; require access to original Word files.

The sanitized PDF itself is omitted here, but these notes mirror the change log that ships with every paid kit.
